

LPH400 LVX

Teaming up with our LPH400 LVB the LPH400 LVX eXtreme basecoat technology was developed for use with 90-95% of basecoat colors and engineered to provide increased productivity in application for solvent or waterborne basecoats. While the LPH400 LVB still remains the set-up for the most difficult or complex colors the LPH400 LVX handles all the middle range colors where productivity and speed is a must.

Extensive field-testing and painter evaluation reports prove that the LPH400 LVX is much faster than the competition and has an ultra smooth application with no technique change. Inlet pressures, spray distance and overlap are the same for the LPH400 LVX as a normal LPH400.

Hybrid metallic, regular metallic, xyrillic and regular pearls need more than a one gun set-up to achieve the best color match and performance. Therefore, the LPH400 LVX eXtreme basecoat gun performs best with 90-95% of these basecoat colors and for the other 5-10%, the LPH400 LVB is the best solution.

The LPH400 LVX is also eXtremely proficient with waterborne coatings and gives an added advantage for waterborne basecoat application in hot dry climates.
